

Lami-paper NEWS PAPER

This paper, recreating realistic foreign newspaper articles, is treated with an extremely thin laminate coating on one side.

- The one-sided lamination prevents the passage of oil and moisture.
- It protects against oil stains on dishes from foods with high oil content, such as bread and donuts.
- It can be used in various ways, either directly placing food on it or wrapping food with it (one laminated side, one paper side).
- Since it's cut randomly, you cannot choose the article or pattern (the patterns below are examples of cut patterns).

ラミニュースペーパー

海外の新聞記事をリアルに再現した紙の片面に極薄のラミネート加工を施しています。

- 片面ラミネート加工で油分・水分を通しません。
- パンやドーナツ等の油分の多い食品から食器などの油污れを防止します。
- 食品を直接載せたり、包んだり、様々な用途でご使用いただけます (片面ラミネ面、片側紙面)
- ランダムカットされますので、記事や絵柄はお選び頂けません。(以下絵柄位置はカット柄です)

FINAL NOTICE

URGENT MARKETING

send emails, text messages, and join online communities. These forms of communication are quickly reducing the number of phone calls, faxes and letters that we receive. These new technologies are changing the ways in which we communicate. For one, communication is becoming more face-to-face in its nature. Also, new abbreviated language is being introduced into quick messages that do not permit time for long-winded explanations. Not to mention the fact that people are drawn closer into association with people and spheres of society that they were members or friends move away from. The sheer increase in the amount of communication keeps people connected. However, while this does create more convenience it also carries the potential of burdening people with heightened demands. For instance, the time expected for one to reply to a message is being shortened drastically from what it may have been in decades past. This may require people to perform tasks quicker or make decisions hastily in order to make a reply in a shortened period of time. On the other hand, we may all just evolve to be more efficient. People may also feel a growing responsibility to keep everyone in their circle of friends and family informed on a more frequent basis. It will be a shame if

Lami-paper TOKYO MAP

This paper, accurately recreating a map of about 156km² around Tokyo with the Imperial Palace at its center, is treated with an extremely thin laminate coating on one side.

- The one-sided lamination prevents the passage of oil and moisture.
- It protects against oil stains on dishes from foods with high oil content, such as bread and donuts.
- It can be used in various ways, either directly placing food on it or wrapping food with it (one laminated side, one paper side).
- Since the map is cut randomly, you cannot choose the area (the patterns below are examples of cut patterns).
